# wet intelligence

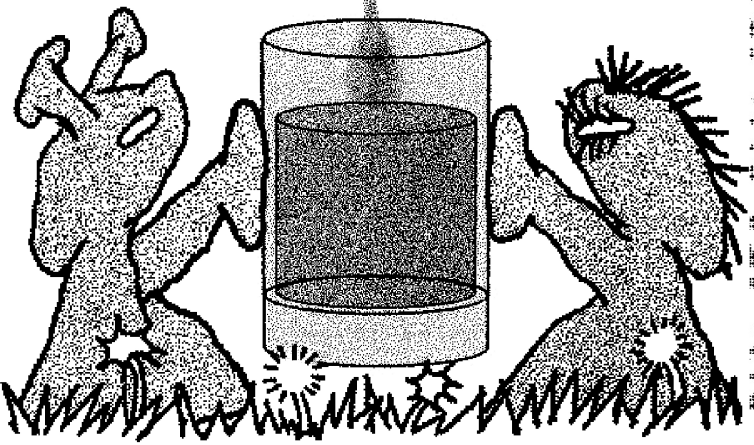
by Lu Fraser

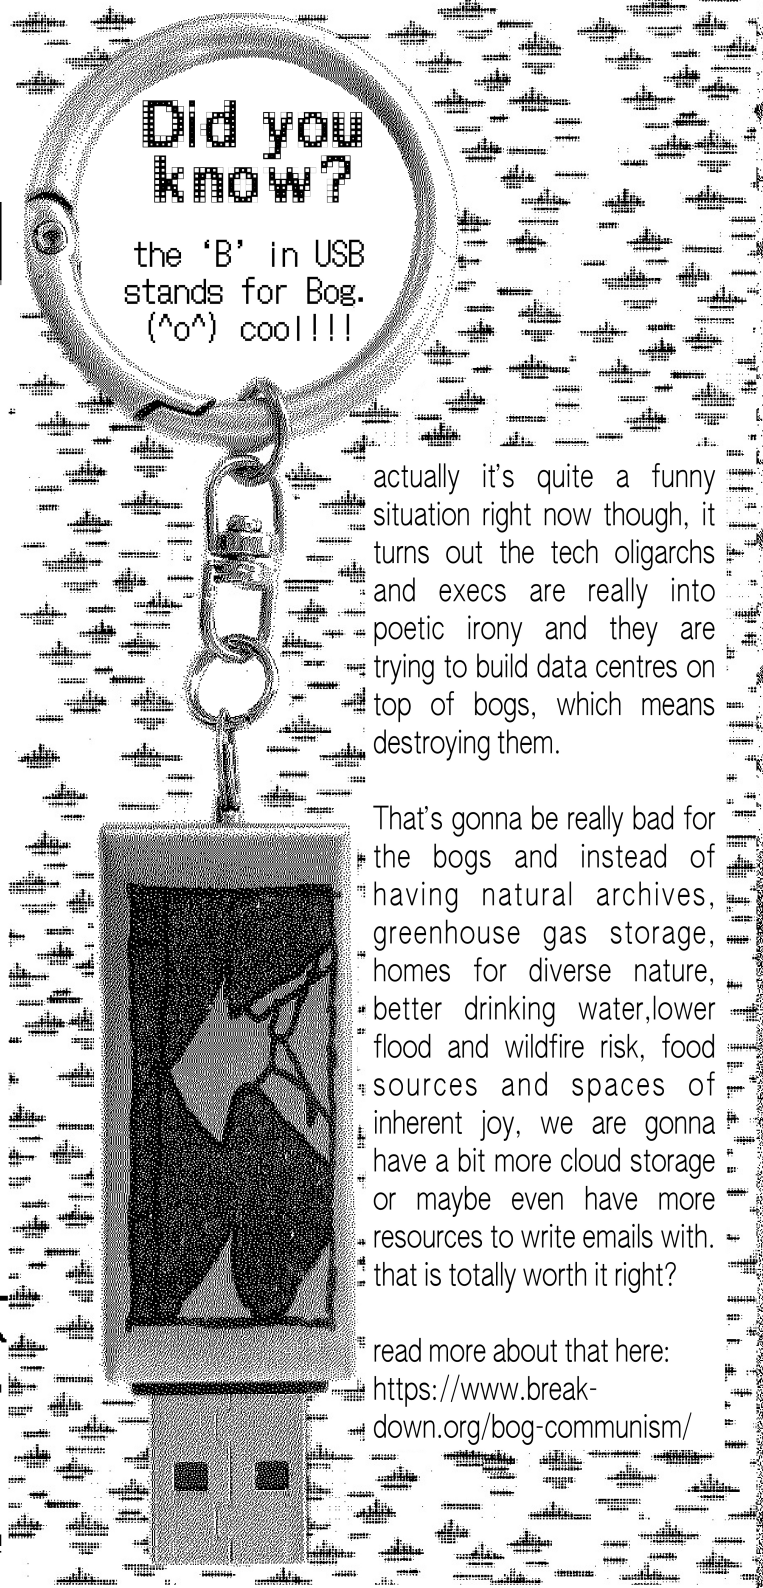
*ask yourself this:*

could your stupid AI make this perfectly preserved 2500 year old dead guy? be honest

The cool thing about bogs is that they are all connected through water, and they're innately connected to us too. Isn't that just the same as the internet? The water we share has so many stories, which we can download by keeping the cycle going between bodies and worlds.

Bogs are a type of data centre that also need a lot of water, but unlike traditional data centres, they also provide natural filtration for drinking water supplies instead of being so so so wasteful of something that is already so scarce

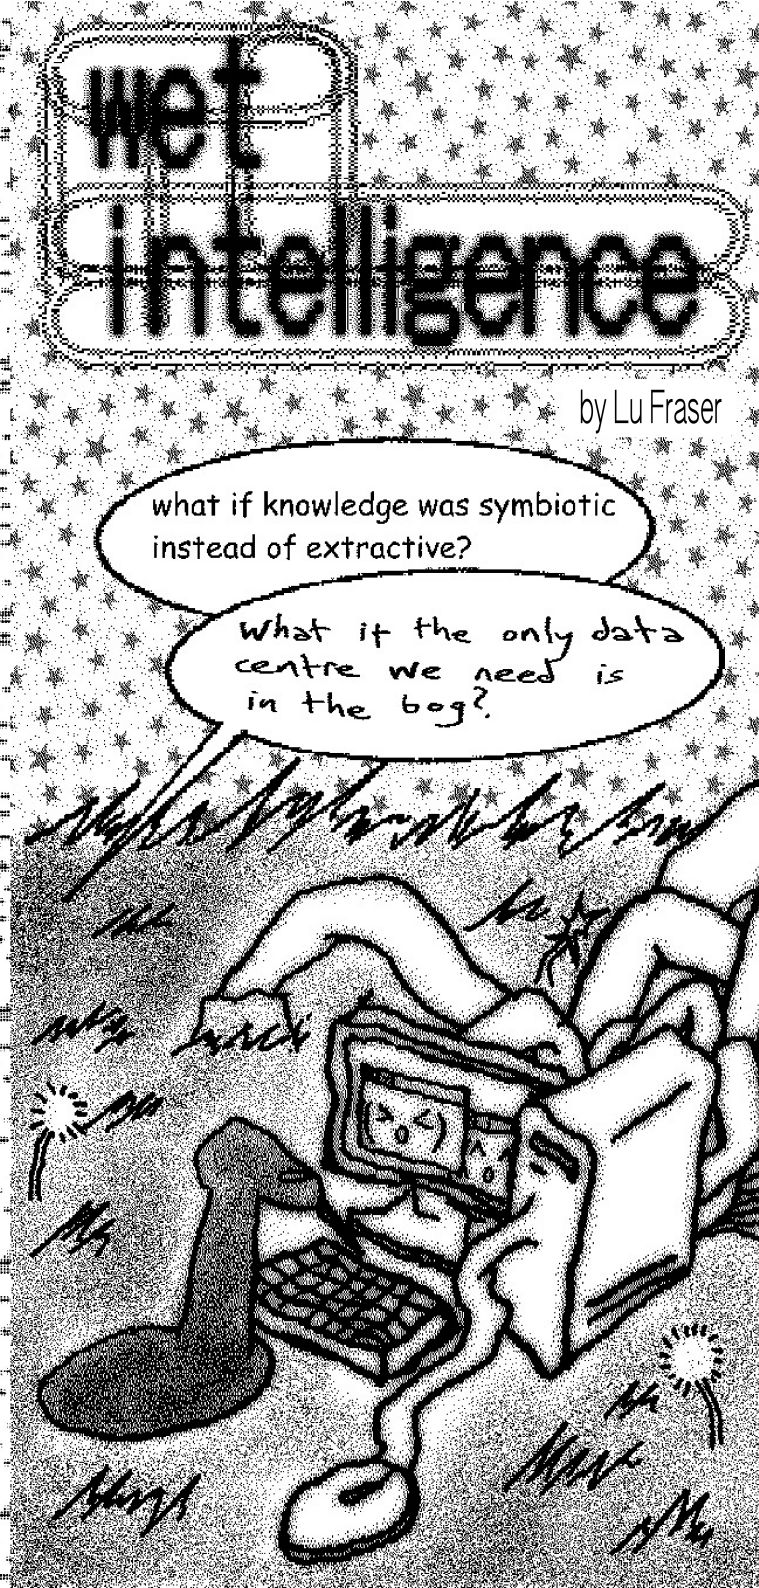




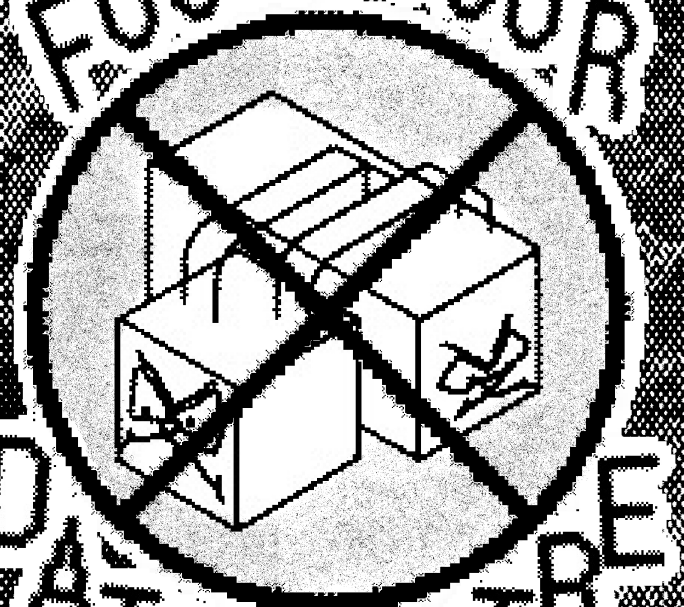
actually it's quite a funny situation right now though, it turns out the tech oligarchs and execs are really into poetic irony and they are trying to build data centres on top of bogs, which means destroying them.

That's gonna be really bad for the bogs and instead of having natural archives, greenhouse gas storage, homes for diverse nature, better drinking water,lower flood and wildfire risk, food sources and spaces of inherent joy, we are gonna have a bit more cloud storage or maybe even have more resources to write emails with. that is totally worth it right?

read more about that here: https://www.break-down.org/bog-communism/



# FUCK YOUR DATACENTRE

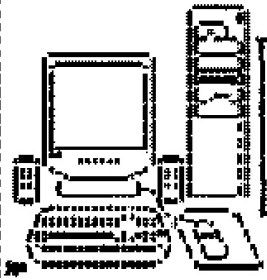


## make a bog instead!

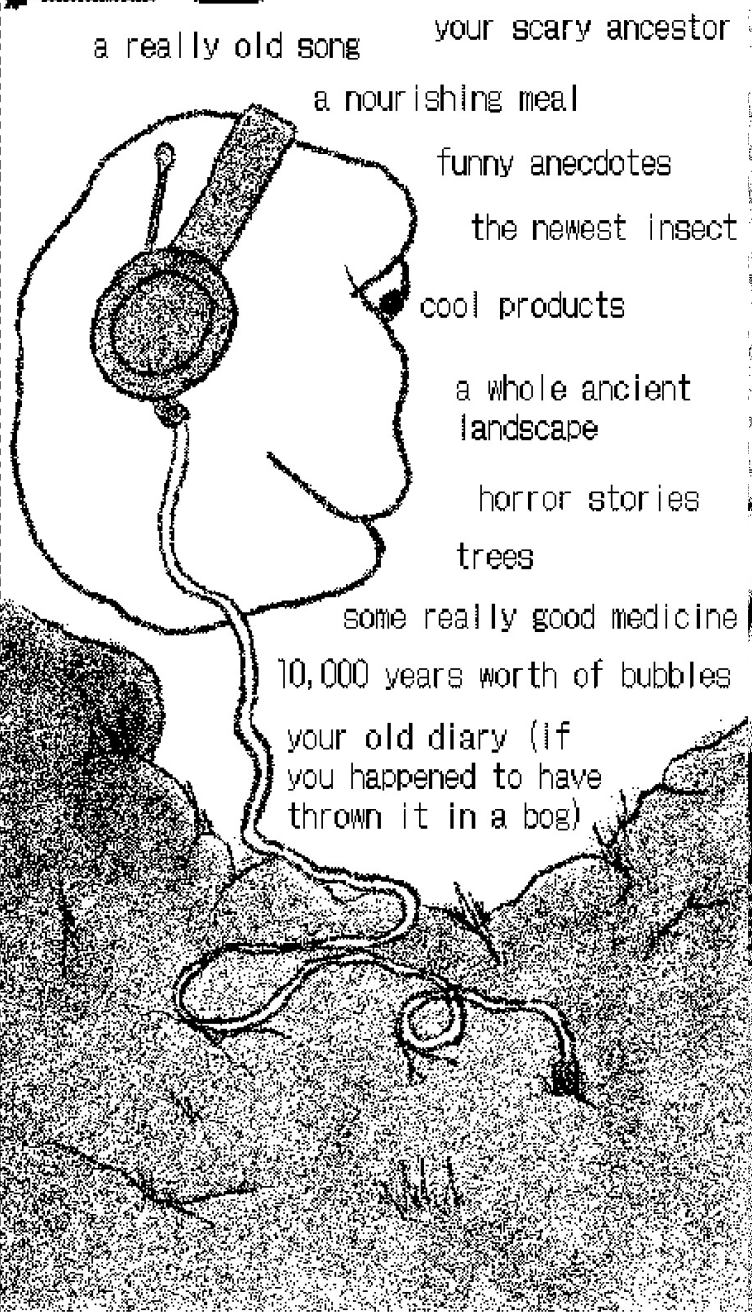
Have you considered the benefits of not exploiting land and instead leaving it alone? Are you aware that not every piece of land is a business venture?

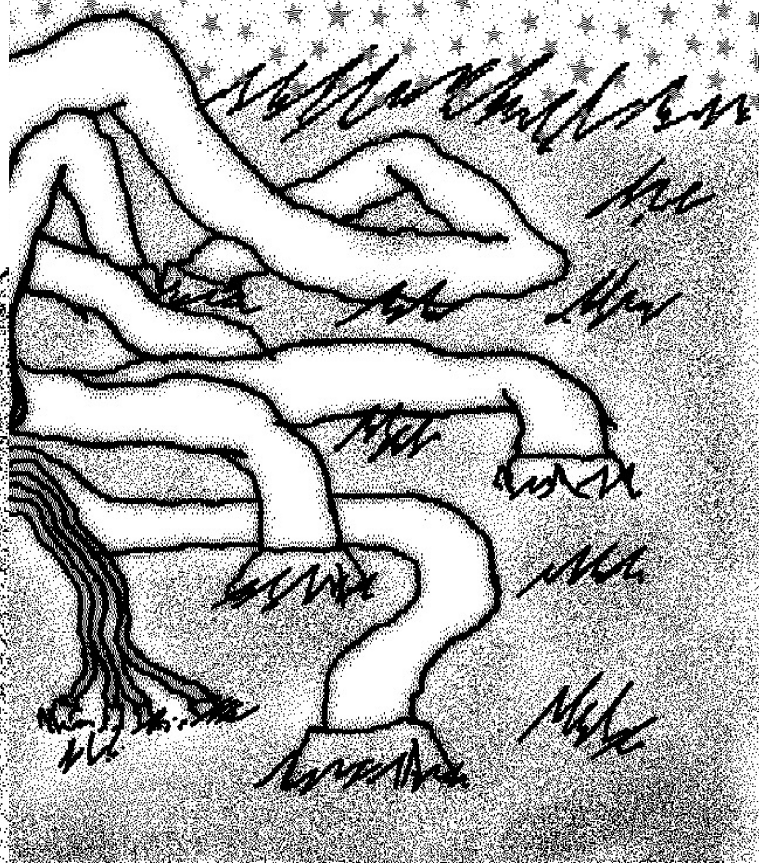
Now is a great time to start. When left alone, bogs can store infinite and immeasurable amounts of wisdom. A different type of user data - the user data of deep ecological time.

If you choose to nurture bogs instead of building your shitty data centre to add to the ai stupidscape, you and your community could reap many benefits...



## what data does a bog contain?





i made a bog read 1000 zines and then asked it to write a zine about bogs as living and dead archives. here's what happened. wake up to the future now. dunk your head in the pool of knowledge.
